

IN THE CLAIMS

Please amend claims 1-5 as follows:

1. (currently amended) A battery pack module that can be inserted into a housing part (1) of a powered hand tool along a direction of insertion (A), having two latching hooks (5) with at least one leaf spring (4) outwardly ~~spring-biased~~ spring-biasing the two latching hooks (5) and arranged on opposite sides of a module housing (3) and oriented transverse to the direction of insertion (A), which are connected to finger pressure surfaces (6) that can be moved from a resting position (I) into a released position (II), wherein the at least one leaf spring (4) is configured to be biconvex and forms a local force maximum (11) between the resting position (I) and the released position (II).

2. (currently amended) The battery pack module of claim 1 wherein the released position (II) of each of the finger pressure surfaces (6) is energetically unstable.

3. (currently amended) The battery pack module of claim 1, wherein the at least one leaf spring (4) is low-damping.

4. (currently amended) The batter pack module of claim 3, wherein each of the two latching hooks (5) ~~are~~ is connected with a respective one of the at least one leaf spring (4) of identical spring characteristics.

5. (currently amended) The battery pack module of claim 4, wherein the at least one leaf spring (4) extends over a longitudinal zone (X) of the finger pressure ~~surface~~ surfaces (6).
